

Climb Comfortably with the **NEW Buck ErgoBelt**. Your Back Will Thank You!

The **New** Buck ErgoBelt - Model 4200

Buckingham Has Your Back!

Buckingham Introduces the next innovation in Linemen's equipment. A modular body belt/harness with ergonomic advantages. The Buck ErgoBelt has a removable lumbar pad that fits into the natural position of the spine. This lumbar support relieves stress to the lower back when a lineman is in the work position on a pole. The addition of lumbar support and seat straps with dee rings positioned for primary attachment provide ultimate comfort when used with the BuckSqueeze, or any other Wood Pole Fall Restriction Device.

FEATURES

A. Abdominal Stabilizer System

- Elastic Abdominal support belt with hook and loop fastener keeps belt positioned on user's pelvis while climbing.

B. Dee Ring Distributing Pads

- Designed to relieve concentrated pressure from the heel of dee by disbursing pressure over a greater area.

C. Equalization Strap

- Transfers users weight from back support to seat section or seat section to back support.

D. Lumbar Pocket

- Removable lumbar pad for ideal back support while climbing.

E. Harness Attachment Buckles

- Attach harness to belt with man rated straps.

F. Removable Seat

- Connects to back pad using steel interlocking T buckles.
- Allows the BuckSqueeze to connect to the lower D rings for increased comfort while climbing.
- The combination of support between the hips and the lumbar area of the back provides ultimate comfort and support.
- Seat D rings can adjust fore and aft for ideal placement and comfort while climbing.

Ergonomic & Versatile

Not only is the New Buck ErgoBelt comfortable, it is versatile! Any harness can be configured to attach to the belt. Simply add option 4C to the model number to incorporate the interlocking buckles. For example:

Ergonomic Innovation for Elevation!

Buckingham's Commitment to Injury Prevention:

Since 1896 Buckingham Manufacturing has been a leader in innovation PPE solutions. In 2007 Buckingham Manufacturing teamed up with COR Ergonomic Solutions, an ergonomic training and consulting company, to collaborate on the first ergonomically designed fall protection harness system used by those working in elevated locations. The result was the Ergovation® harness system. Extensive research went into the development of this fall protection system. Through this investment in innovative, ergonomic product research, development and design, Buckingham manufacturing is proud to now offer a full range of ergonomically designed products specific to tradesmen such as utility linemen, tower workers, rope access technicians, and arborists.

Ergonomic Innovation for Elevation!

Ergonomics is the study of how the workplace and equipment can best be designed for comfort, safety and productivity. Buckingham initiated a study with Dr. Amanda Carpenter and Ed Carpenter to analyze the strain a lineman experiences when executing a job while in the work position on a pole. Traditional linemen's belts are worn around the lower hips and buttock as seen in the picture to the far right. Dr. Carpenter immediately noted that wearing the body belt around the buttocks while in the work position, and with pressure applied creates a curve in the lower back causing stress to the lower vertebrae. And, if lifting heavy objects while in this position, increases the amount of stress to the area. The Buck ErgoBelt supports and cushions the lower back while performing strenuous tasks.

Traditional Lineman's Belt

Sizing the Buck ErgoBelt and Buck LineBacker

To size the Buck ErgoBelt, Buck LineBacker and the Buck LineBacker Deluxe for proper fit, the 'A' and 'B' measurements are required:

- Measurement 'A' is measured approximately 2" above waist and from center of hip bone (seam of shirt) around the small of the back to the center of hip bone (seam of shirt) on other side.
- Measurement 'B' is from center of navel around the small of the back to the center of navel. Measurement 'B' is taken in the same location as measurement 'A'.
